

GULL
DIVING
2024
Our Odyssey

The text is overlaid on a white silhouette of a gull in flight, which is part of the overall branding. The background of the entire page is a vibrant underwater scene with a coral reef on the left and two divers on the right, surrounded by many colorful fish.

Our Odyssey 楽園を探す冒険

水の惑星と呼ばれる地球に存在する楽園、海は私たちを誘う。
ダイビングで海中に広がる世界を知った時、ダイバーの飽くなき冒険が始まる。

ひとときも同じ海は存在せず、刻々と表情を変えていく。水と戯れ、さまざまな生き物や景色と遭遇し、探求心が次々と湧き起こる。
海は、人々を飽きさせない。海で出逢った人々と過ごす経験も、すべては旅の醍醐味となり私たちに魅了する。
ダイバーにとって「楽園を探す旅」は、知らず知らずのうちに人生に欠かせないものとなっている。

楽園を心に刻み、忘れ得ぬ体験を脳裏に焼き付ける。視野の広いマスクが自身の目となり
心の赴くまま海中をどこまでも進むための、職人が心を込めて作るラバーフィンが自身の脚となる。
相棒のギアを詰め込み、どこにでも連れて行ってくれるキャリーバッグも冒険に欠かせない。

まだ見たことのない海へ、新しい楽園を探す冒険の準備をはじめよう。
信頼できるパディ、ダイビングギアGULLと共に。

OUR ODYSSEY

THE BLUE PLANET EARTH, OFTEN CALLED THE “WATER-WORLD,” EXTENDS AN INVITATION TO EXPLORE ITS VAST OCEANS. THE INSTANT WE DIVE INTO THE DEPTHS, A CONTINUOUS ADVENTURE BEGINS.

EVERY MOMENT IN THE SEA IS A UNIQUE EXPERIENCE, WITH THE ENVIRONMENT CONSTANTLY CHANGING AND EVOLVING. FROM ENCOUNTERS WITH DIVERSE MARINE LIFE TO DISCOVERING WONDROUS FORMATIONS OF UNDERWATER LANDSCAPES, AND SIMPLY PLAYING WITH THE WATER, EACH INSTANCE SPARKS A SENSE OF CURIOSITY. THE OCEAN SERVES AS AN EVER-CHANGING CANVAS FOR EXPLORATION.

GULL'S RUBBER FINN, METICULOUSLY CRAFTED BY SKILLED ARTISANS, SEAMLESSLY BECOME AN EXTENSION OF OUR LEGS, ENABLING US TO NAVIGATE THE UNDERWATER REALMS FREELY.

GULL'S FINELY TUNED MASKS NOT ONLY INSTILL CONFIDENCE BUT ALSO OFFER A CLEAR VIEW, CREATING MEMORIES OF THE ENDLESS PARADISES WAITING TO BE DISCOVERED.

NOW IS THE TIME TO EMBARK ON A JOURNEY TO THE UNEXPLORED SEAS WITH GULL, YOUR TRUSTED COMPANION.

THE BEST EQUIPMENT TO SUIT ALL YOUR NEEDS.

ベストイクイップメント - あなたのすべてのニーズを満たします -

スノーケリングやダイビングを安全に行うためには、自分が利用できる中で一番いい道具と、自分が行うダイビングのそれぞれのタイプに合った正しい装備が必要です。GULLには研究開発の長い歴史があり、デザインと高い品質の装備をつくる中で、今なおリーダーで有り続けています。1955年の設立以来、GULLは、皆さまがダイビングを安全かつスタイリッシュに楽しめるよう前進し続けます。

海の訪問者である私たちの体は、水中環境に対する保護と順応性を必要とします。GULLは体を保護する上質なラインを開発し、これを「バイオマージシステム」と呼んでいます。自社工場が開発された高い技術による軽いゴムを使い、水中のダイバーを頭からつま先まで守るため、私たちは第二の皮膚と言える製品を生み出しました。

ADVENTURE SPORTS ARE ALL ABOUT A BALANCE OF AWARENESS, KNOWLEDGE AND FUN. EXPLORE YOUR LIMITS AND PLAY SAFE.

TO SAFELY DIVE OR SNORKEL, YOU NEED THE FINEST EQUIPMENT, ALONG WITH THE MOST APPROPRIATE GEAR AVAILABLE FOR THE DIVING ENDEAVOR YOU PARTAKE IN. ESTABLISHED IN 1995 GULL HAS AN EXTENDED HISTORY IN RESEARCH AND DEVELOPMENT AND REMAINS TODAY'S LEADER IN THE DESIGN AND MANUFACTURING OF HIGH QUALITY SCUBA DIVING EQUIPMENT. GULL CONTINUES TO PUSH BEYOND OUTDATED CONVENTIONS SO THAT YOU CONTINUE TO ENJOY YOUR UNDERWATER EXPERIENCES SAFELY, COMFORTABLY, AND EFFICIENTLY.

AS VISITORS OF THE OCEANS, OUR BODIES REQUIRE PROTECTION AND ADAPTATION TO THE ENVIORNMENTS BELOW. GULL HAS DEVELOPED A PREMIUM LINE OF BODY PROTECTION WE CALL “BIO-MERGE SYSTEM”. USING HIGH-TECH, LIGHT WEIGHT RUBBERS DEVELOPED IN OUR OWN FACILITIES, WE CREATED A SECOND SKIN PROTECTING YOU FROM HEAD TO TOE WHEN DIVING BELOW.

Chibishi Islands, Okinawa Japan

Thirty minutes west of the bustling city of Naha in Okinawa lie the Chibishi Islands, featuring a diverse range of coral reefs that stretch across the area.

A full-page background image showing two divers in a dark underwater cave. The cave walls are covered in coral and rock. Light streams in from an opening at the top, illuminating the scene. The divers are equipped with G Series gear, including masks, regulators, and BCDs. One diver is in the foreground, looking towards the camera, while the other is slightly behind and to the right. The floor is sandy and uneven.

G Series

Ultimate in perfection

Revolutionary technology, epochal ideas, and the creation that implements all this exhaustively : the G Series. These products boasting both high functionality and beautiful form have won high acclaim and instant recognition as the top brand among professional divers. Their quality is now acknowledged around the world. "Ultimate in perfection" – continuing to bring surprise and delight to divers. This is the ideal form and the mission of the G Series.

Chibishi Islands, Okinawa
Japan

Mysterious caves entice the curiosity of divers amidst the stretches of coral reefs.

LUVOS

Introducing Gull's all-new wide single-lens mask, delivering the largest field of view in Gull's lineup.

G Series

Bright and wide field of vision

G Series

LUVOS

LUVOS NEW

Designed entirely from the ground up, this mask and degree of lens reflection are meticulously engineered with the concept of "bright and expansive vision". Experience exceptional brightness and clarity—a true spectacle.

UV380 CUT AR IR Lens

UV AR IR

The lens features an anti-reflective UV380 coating for enhanced transparency compared to UV420 lenses. With anti-reflective (AR) processing on both sides, it ensures clear underwater vision. An added infrared (IR) protective coating helps minimize skin aging around the eyes.

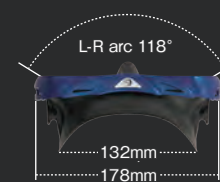

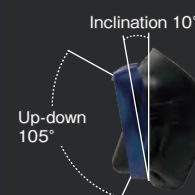

Lens Function ▶ P12

UV420CUT AR LENS UV420AR

Protects eyes from UV rays (up to 400nm), and HEV light (400-420nm), that contribute to oxidative stress and deterioration of lutein. AR (Anti-Reflective) feature improves light transmittance for better visibility.

Lens Function ▶ P12

Volume:170cc
Weight:266g

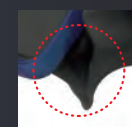

Open View

LUVOS boasts the largest vertical view at 105° amongst Gull masks, and the widest horizontal view at 118° amongst single-lens masks, making it Gull's largest view single-lens mask ever. Rivaling the field of view found in frameless masks.

Aquadynamic Frame

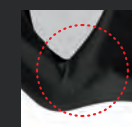

The aquadynamic frame directs water flow through the frame, minimizing resistance and providing a smoother swimming experience with reduced drag.

Comfort-Fit Technology (PATENTED)

Reinforced Damper

Facial movements may compromise a mask's seal causing flooding around the lips. Reinforced dampers keep the skirt's edges securely in place preventing flooding even with substantial facial movements.

3D Leak Guard

Faces tend to crease around nose and mouth (laugh lines), and do even more so when clenching a snorkel or regulator. The skirt's inner three-dimensional surface is specifically engineered to maintain a locked seal at the laugh lines.

Easy-Pinch Nose Pocket

Construction of the nose pocket and surrounding area is altered making it much easier to pinch the nose for improved equalization. Gaps between nose and frame are widened allowing for an easy pinch even when wearing thicker gloves.

Lens Function ▶ P12

Leakless System

Water is most likely to flood the nose and mouth area when gaps open in the seal between mask and skin. This may happen, for example, if the mask rides up on the face, and if leaking occurs at the cheeks when you are adding a mouthpiece or at the the corners of the mouth when you grin underwater. Here, to avoid compromising the seal when your facial muscles move, the mask form is optimized to maintain fit and feel.

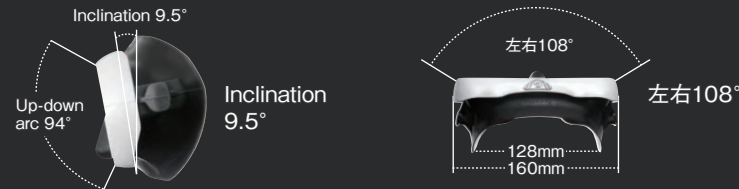

Smaller Size

When wearing the VADER, some women said the mask felt a little too big. Designed to fit a female face, to be neither too big nor too small when worn by a woman, the new form reflects this sensitivity.

Low Volume

Volume:125cc*2 Weight:223g

Even while inheriting the form of the VADER, the low-volume design makes it easier to exhale into the mask for equalization and mask clearing.
*2 Measured using Gull standard procedures.

Low Volume

Volume:140cc*2 Weight:246g

Low volume further improves the excellent arc of vision you get with the single-lens design. Enjoy a wide view that's great for any form of diving.
*2 Measured using Gull standard procedures.

No Center Frame

The benefit of a lens undivided by a center frame is the overlapping of the arcs of vision of the right and left eyes. You get a bright, broad field of view and less feeling of restriction. Made for high performance in diving situations where field of view is crucial.

G Series

2024 MASK FUNCTION

G-Series masks sport the latest in cutting edge technology with top grade performance features.

*See Pg. 8 for Mantis LVR details.

Skirt with Curled Lip and Integrated Strap Clip
All-in-one design ensures firm but gentle contact with the face. When you pull on the strap, you get an effective seal that is less likely to leave impressions on your skin.

Curled Lip
The skirt is fringed with a curled lip. It provides an effective seal that is less likely to leave impressions on your skin.

3 Types of High-Performance Lens

UV380 CUT AR IR Clear Lens
This lens has a UV380 coating anti-reflective (AR) treatment on both sides to offer transparency with a high degree of UV protection. An added infrared (IR) protective treatment minimizes light-induced aging of skin around the eyes.

UV420 CUT AR Amber Lens
UV420 CUT AR lenses offer protection against UV & HEV rays preventing deterioration of Lutein (responsible for protecting the eye tissues from sunlight damage). The amber coloring enhances visibility by increasing contrast to better see objects underwater.

Super Clear Lens
Enables greater clarity than standard glass. You see more objects more clearly because, by rigorously excluding impurities from the glass, light transmittance is maximized. With a clear silicone mask, skirt reflections on the lens are also minimized.

DX Spec Mask Buckle
While the mask is fitted, the release buckle and fine pitch strap adjustability make it easy to find the most comfortable fit. Even wearing thick gloves, you can easily adjust the mask using one hand.

Soft Damper
Normally, due to pressure squeeze and other causes, mask frames designed to improve the downward arc of vision tend to exert more pressure on the cheekbones. The soft damper relieves this stress.

Drain Skirt
The drain skirt design improves water expulsion during mask clearance and minimizes water pooling.

MANTIS LVR

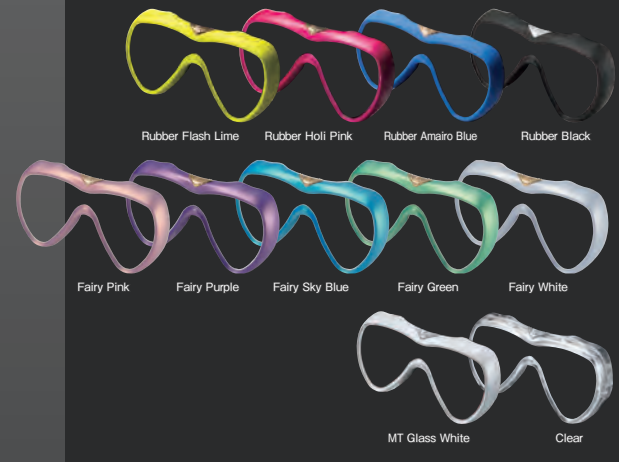

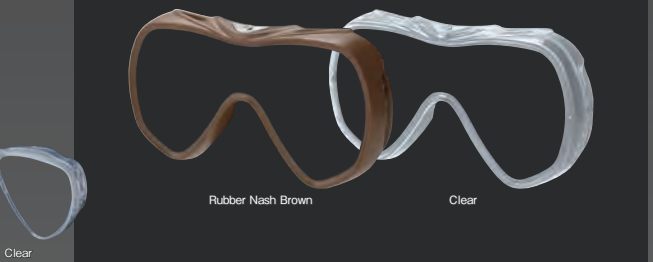

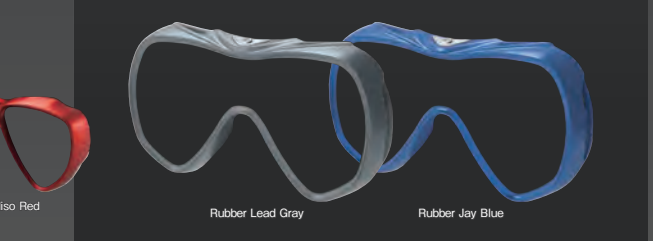

G Series

2024 COLOR VARIATION

An array of vibrant frames with options ranging from bright mirror finishes to sleek matte textures.

LUYOS

Leakless System
Water is most likely to flood the nose and mouth area when gaps open in the seal between mask and skin. This may happen, for example, if the mask rides up on the face, and if leaking occurs at the cheeks when you are adding a mouthpiece or at the the corners of the mouth when you grin underwater. Here, to avoid compromising the seal when your facial muscles move, the mask form is optimized to maintain fit and feel.

OPTICAL LENS Accepts Optical Lenses ▶P22~23
Optical lenses ranging from ready-made to custom options to match your specific eyesight.

LENS FUNCTION

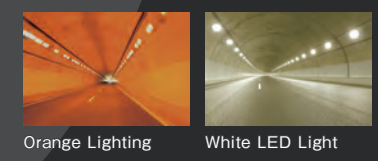

UV380 CUT AR IR Clear Lens
This lens has a UV380 coating anti-reflective (AR) treatment on both sides to offer transparency with a high degree of UV protection. An added infrared (IR) protective treatment minimizes light-induced aging of skin around the eyes.

UV420CUT AR LENS
Protects eyes from UV rays (up to 400nm), and HEV light (400-420nm), that contribute to oxidative stress and deterioration of lutein*. AR (Anti-Reflective) feature improves light transmittance for better visibility.

*1 People say that lutein acts like natural sunglasses. It is present as a pigment in the retina, the crucial part of the eye that receives light and lets you see. Here, helping to prevent cumulative macular degeneration, it blocks harmful light and has an anti-oxidant effect. Lutein is destroyed when it absorbs harmful light. Its presence in the retina is limited and, because the body cannot make lutein, it can only be replaced by eating lutein-rich food.

Comparing Orange and White (LED) Light Effects in a Tunnel
Orange light makes objects more visible by in increasing the contrast of shadowed edges. White light increases overall visibility by generally lighting everything more brightly. As in the orange-lit tunnel, a UV400 amber lens increases contrast. Meanwhile, a UV420 lens lets everything remain brighter overall.

Color Lens Difference
*Photos are representative images.

Super Bullet

Able to withstand harsh conditions: tough with refined performance Gull's high-spec, top-of-the-line snorkel.

Length : 405mm
Volume : 180cc
Weight : 186g
Inside Diameter : 21φ

21-mm Dia. Large-Bore Pipe
The large bore pipe enables high-volume airflow and the smoothest air intake of all the Gull snorkels.

Stabilizer Pipe
Sleek, streamlined pipe has less drag. Less drag means less tube shudder and less discomfort from tube shift.

Movable Mouthpiece
Freely adjust the angle to easily find the most natural, comfortable position for you.

Twin Purge Valves
With double the usual number of purge valves you can clear water more quickly from the snorkel. After expulsion, by channeling any water that remains into the purge chambers, the design diverts water away from your mouth. Clearing the snorkel is really easy.

One-Touch Holder
To easily detach from mask strap, simply squeeze the sides of the clip.

GT

Powerful semi-long wide rubber jet fins combining power with precision.

One-Hand Easy Grip Strap

Spring strap is fixed with a finger handle minimizing the hassle of donning and doffing, even when wearing thick gloves.
 ※Gloves removed in photo to better demonstrate gripping of finger handle.

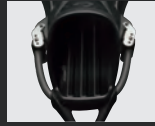

Adjustable Spring for Precise Power

Adjustability of up to 4cm for better fitment and ultimately more reliable powerful propulsion.

Dry Suit Compatible Foot Pocket

GT's dry suit compatible foot pockets are outfitted with large openings allowing for easy wear and removal for almost any drysuit boot to fully be inserted. Grooves on the inside of the pockets help slide your boot in place for a smoother insert.

Instant Power

GT offers instantaneous extra torque power when you most need it. Great for diving with a heavy load, battling tough currents, performing quick getaways, and aiding incapable divers get to shore safely.

Semi-Long, Wide Blade Stability

The use of our exclusive 100% made in Japan Kinugawa rubber offers flexibility that effectively transmits the power of your kick to the blade. Compared with other jet style fins, GT's bending point occurs closer to the foot pocket displacing enormous volumes of water with every kick. GT promises monstrous power, all while the jet holes actively work to stabilize the blade.

Jet Hole Stabilizers

As pressurized water exits conventional jet holes, it immediately disperses into the surrounding water. Our patent pending jet hole stabilizers act as a water flow guide, delaying the dispersal of water. This leaves an area of negative water pressure behind the fin allowing your kick to pull out more efficiently.

Barracuda

The ultimate rubber fins for experts. We want you to experience for yourself the world's longest model.

3D Pocket

Firmly hugging the Achilles tendon, the 3D pocket opening has been designed to reduce looseness and to hold your foot. Naturally control fins which, like sports shoes, feel like extensions of your legs.

Anti-Slip Grip

As well as the usual central tread, grip extends to the rib section. Wraparound tread gives surer footing on slippery boat decks and rocky shores.

Special Rib Form

The raised blade ribs eliminate side planing and blade twist, which would otherwise occur with long fins. Fin work is smooth. The ribs maximize rubber rebound to enable you to enjoy confident, powerful propulsion.

Comes with Custom Carry Bag
 Size: 815 x 245 x 105mm
 ※ Will fit in Square Mesh Bag.

Limited Quantity

Barracuda (Professional) Carrying Case Included

Utilizing the highest quality KINUGAWA Super-X Rubber maximizes Barracuda's quick rebounding action for both up and down kicks. Offering instantaneous power and speed to battle even the toughest currents.

FUNCTION

Gull masks offering comfort underwater. Each meticulously engineered to provide ample visibility and function.

Curled Lip
The skirt is fringed with a curled lip. It provides an effective seal that is less likely to leave impressions on your skin.

Super Clear Lens
Enables you to see objects more truly than with standard glass. Exceptionally free of impurities, the superior transparency the glass lets you see objects more clearly. With clear silicone masks, the lens prevents reflections of the skirt on the lens.

Accepts Optical Lenses ▶P22~23
Optical lenses ranging from ready-made to custom options to match your specific eyesight.

Accepts Optical DX Spec Mask Buckle
While the mask is fitted, the release buckle and fine pitch strap adjustability make it easy to find the most comfortable fit. Even wearing thick gloves, you can easily adjust the mask using one hand.

Soft Damper
Normally, due to pressure squeeze and other causes, mask frames designed to improve the downward arc of vision tend to exert more pressure on the cheekbones. The soft damper relieves this stress.

Drain Skirt
The drain skirt design improves water expulsion during mask clearance and minimizes water pooling.

Strap Clip Integrated with Skirt
Compared with designs with strap-to-frame attachment, the pull from this skirt attachment brings the mask edge in better conformity with the face and provides a proper fit. Skin contact feels more natural and the seal effectively keeps water out.

UV Care Lens
Lenses with UV blocking protect your eyes and delicate skin. Kinder to eyes and delicate skin, this glass cuts UV light. UV care glass cuts out about 45% of harmful UV-A light that, owing to the depletion of the ozone layer, reaches sea level (45% is about twice the blocking power you get with ordinary glass). The lenses give you the same level of protection that ordinary tinted glass usually provides. But, because they are as clear as normal glass, you both protect your eyes and get a bright and clear impression of the underwater world.

Interlock System
Unlike conventional inner-ring fitting systems, where the lens is held only by a ring around the inside of the frame, here the frame is pressed down at the central bridge, and the assembly is fixed using a screw. Keeping the lenses in place, this double-safe grip is more secure against emergencies that might occur.

Leakless System
Water is most likely to flood the nose and mouth area when gaps open in the seal between mask and skin. This may happen, for example, if the mask rides up on the face, and if leaking occurs at the cheeks when you are adding a mouthpiece or at the corners of the mouth when you grin underwater. Here, to avoid compromising the seal when your facial muscles move, the mask form is optimized to maintain fit and feel.

			[+diopter] to S+C = +5.00 (C value to +3.00)	

*1 For G Series order-made applied lenses, glass can be chosen from the two types listed below (choice not available for direct-ground lenses).
 ① UV420 CUT AR Amber lens
 ② Super Clear lens
 *2 Mantis 5 order-made applied lenses are available in Super Clear glass (different specification for direct-ground lenses).
 *3 Production is not possible when S + C is 10.25 or greater.
 * Normally, correction for PD from 55 mm to 75 mm can be provided, but if "plus" cylinder correction for astigmatism is required, PD setting is not possible.

Details Required on Order-Made Lens Prescription

Corrective Lens Prescription Date: ____ Year ____ Month ____ Day

	Spherical Lens	Cylindrical Lens	Cylinder Axis	Base	Naked Vision	Corrected Vision	Total Vision
R	① D	② D	③ °				
L	D	D	°				

④ For distance ⑥ Pupillary distance mm (Left mm, Right mm)

	Spherical Lens	Cylindrical Lens	Cylinder Axis
R	D	D	°
L	D	D	°

⑤ For middle distance For reading Pupillary distance mm (Left mm, Right mm)

※Required for bifocal lenses.

- Required Information for Corrective Lens Orders
- SPH or S indicates spherical lens. For near-sightedness (myopia), the negative S value is preceded by - (minus sign). For far-sightedness (hyperopia) the positive S value is preceded by + (plus sign).
 - CYL or C indicates cylindrical lens.
 - AX or axis indicates cylindrical axis. Value shows the amount of astigmatism as a value between 0° and 180°.
 - Lenses to see distant things better are often indicated by for distance.
 - Lenses to see close things better are often indicated by "for reading." (They are also sometimes indicated by an ADD value.)
 - PD indicates pupillary distance. It is the distance between the center of the pupils in the right and left eyes. Sometimes, separate values are entered for the left and right eyes, and sometimes the total distance is entered.
- Things to be Aware of When Ordering
- The range is limited when S and C values are [-] & [+] or [+ & -]; please check with us before sending the prescription.
 - When ordering, be sure to include a prescription obtained from an ophthalmologist or optician. Please understand that it may not be possible to accept an order without a proper prescription.
 - Gull custom lenses do not support prism or specified E.P. (Eye Point).
 - Please understand that after an order is received, it is not possible to cancel it or change any details or options, or to ask for an exchange of completed items.

For All Lenses, Gull Relies on the Technical Expertise of Partner Company **Tokai Optical Co., Ltd.**

Trusted in 50 countries around the world, the world's number-one custom eyeglass lens maker.

Since the company was founded in 1939, through sincere commitment to expertly making ophthalmic lenses, Tokai Optical has acquired extensive experience and technical capabilities. Today it has a 16% share of the Japanese market. At the high-tech headquarters in Hanazono Industrial Park, Okazaki, Aichi Prefecture, Tokai Optical makes products for Japan and for export to Southeast Asia, Europe, North America, and other countries.

FUNCTION

Snorkels for a wide range of snorkeling and diving activities.

Dry-Upper Design Keeps Water Out
Dry-upper design prevents splash from entering the end of the snorkel.

Stabilizer Pipe
Streamlined tube reduces vibration and discomfort from tube shift.

18 Gauge Pipe
Thickness of pipe and bore diameter are designed to facilitate relaxed, easy breathing.

One Touch Clip
It is easy to attach and detach the snorkel just squeeze either side of the clip that attaches to the mask strap.

Large Purge Chamber Air Channel Stays Clear When Water Remains in Tube
Internal corrugations on the inside of the curve ensure that the tube bends to allow you to comfortably fit the mouthpiece. The opposite inner wall, however, is smooth and lets water easily drain away.

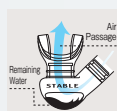

Specially Designed Mouthpiece
To better fit the upper and lower profiles of the teeth, the grips are vertically asymmetrical. There are also two sizes, one more suitable for men and the other for women. For most users, fatigue does not build up. Even after using the Canal for hours, still comfortable, you will hardly notice that your mouth has been gripping the mouthpiece.

Replaceable Mouthpiece
Mouthpiece is detachable and replaceable in case it becomes discolored or damaged from prolonged use.

Large Purge Chamber Air Channel Stays Clear When Water Remains in Tube
Air passage is open even if water is in tube.

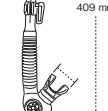

SNORKEL

Whatever kind of diving you do, whether you are a beginner or a professional, Gull has a snorkel for you.

MEN'S CANAL STABLE

To enable stress-free expulsion, design is optimized for water clearance. All-around model for use in different conditions.

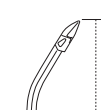

Volume: 158cc
Weight: 125g
Inside Diameter: 18φ
Mouthpiece size: 56mm

*Total snorkel length is measured during usage conditions (with the bellows bent).

WOMEN'S LEILA STABLE

Volume: 158cc
Weight: 125g
Inside Diameter: 18φ
Mouthpiece size: 47mm

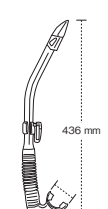

*Total snorkel length is measured during usage conditions (with the bellows bent).

MEN'S CANAL DRY SP

Simple form and function make this a popular standard choice for different diving styles.

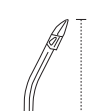

Volume: 137cc
Weight: 135g
Inside Diameter: 18φ
Mouthpiece size: 47mm

*Total snorkel length is measured during usage conditions (with the bellows bent).

WOMEN'S LEILA DRY SP

Volume: 125cc
Weight: 130g
Inside Diameter: 18φ
Mouthpiece size: 44mm

*Total snorkel length is measured during usage conditions (with the bellows bent).

SNORKEL OPTIONAL PARTS

Replaceable parts and storage items especially for Gull snorkels.

Orange color offering excellent visibility both on the surface and underwater is also available for selection.

GP-7205B Dry-Upper piece
○ For Canal & Leila Stable / Canal & Leila Dry SP
Black / Clear / Orange

GP-7203B One Touch Holder
○ For Canal & Leila Stable / Canal & Leila Dry SP
Black / Clear

GP-7204B One Touch Holder for Bullet
Black / Clear

GP-7202C Mouthpiece, Regular or Mini
○ Regular (Canal Stable)
○ Mini (Leila Stable)
Black silicone / Clear
* Can also be used with regulators; depending on the model, some regulators may not fit.

GA-5003B Mouthpiece Cover
Clear

KS-3904 Snorkel Pipe Fixing Loop
M / L / XL Clear silicone
KS-3901 Snorkel Pipe Fixing Loop
L / XL Black Rubber

* XL (bore 22.5 mm) for Samurai Extreme and Canal Series, L (bore 21.5 mm) for Canal Series, M (bore 19 mm) for Leila Series.

PRODUCT COMMITMENT

The Distinctive Qualities of Natural Rubber Combined with the Soul of Skilled Craftsmanship.

KINUGAWA Fins

Born from One of Japan's Leading Rubber Manufacturers.

Now trusted by divers all around the world, Gull's made in Tokyo production history began in the rubber industry as Kinugawa. Kinugawa initially produced rubber automobile parts such as weather strips and other sealants. It wasn't until 1955 when Kinugawa began shifting its focus to exclusively manufacturing diving equipment. Kinugawa became a diving gear manufacturer in Japan, helping to pioneer the industry domestically. Its reputation continued to grow and in 1964, was entrusted the deed to produce O.E.M. diving equipment for a renowned international diving brand. The company name was changed in 1967 to Kinugawa Pacific marking with it a new company mission; "To make the world's best masks, fins, and snorkels from Tokyo". The production and innovation of the high-quality equipment led to the birth of Gull in 1983.

Why Natural Rubber?

Through rigorous testing of different materials and after repeated trials, it was decided that natural rubber is best for fin production. Unlike synthetic rubber, natural rubber exhibits excellent propulsive force with high elasticity giving GULL fins their signature feel and performance. Natural rubber is also adjustable and can be modified to construct a variety of fins that accommodate to all skill level of divers. Shorter-blade fins incorporating a softer rubber compound are easier to control and allow for suitable propulsion with lighter kicks, while longer blades with stiffer rubber compounds display higher propulsive force. Varying rubber compounds can also be blended together offering softer and stiffer properties where needed. An example is the use of a more pliable compound at the heel for easier donning and doffing.

No Pair the Same

Unlike using synthetic rubber, Kinugawa is challenged by working with an organic material. The rigidity and color of natural rubber are subject to factors such as country of origin, year of collection, and climate during production. Hence, there may be slight inconsistencies from pair to pair. Manual processes such as blending and kneading of the natural rubber stabilizes and prevents deterioration of the material. These procedures are constantly being adjusted depending on climate and humidity to best achieve consistent firmness and elasticity. The coloring of natural rubber-based products subject to molding by high pressure and heat of several hundred degrees requires complex techniques and advanced labor. It is solely Kinugawa whose technology and experience is has been capable of producing a vast array of colorways. These multifaceted handmade processes for production of natural rubber refinement results in slight variances of color, texture, and shape even for the same product, making every pair truly unique.

Manufacturing Process

Raw Materials	Kneading	Aging & Cutting	Compression Molding (Vulcanization)	Trimming	Inspection	Packaging
Only high-quality natural rubber with few impurities is used.	Kneaded with a precise formula for premium quality, durability, and elasticity.	The rubber is left to age to fortify its properties. It is then cut into blocks for pressing.	The blocks are then placed into the rubber molding press for up to 10 minutes.	Excess rubber is hand trimmed, defining the shape of the fin.	Each and every piece is manually inspected by experienced staff.	After passing inspection, fins are packaged and ready for shipment.

FUNCTION

Gull offers a wide range of rubber fins for beginners and experts. From full-foot fins that feel like an extension of the body, to versatile strap fins for all sorts of diving applications; from wetsuits to drysuits.

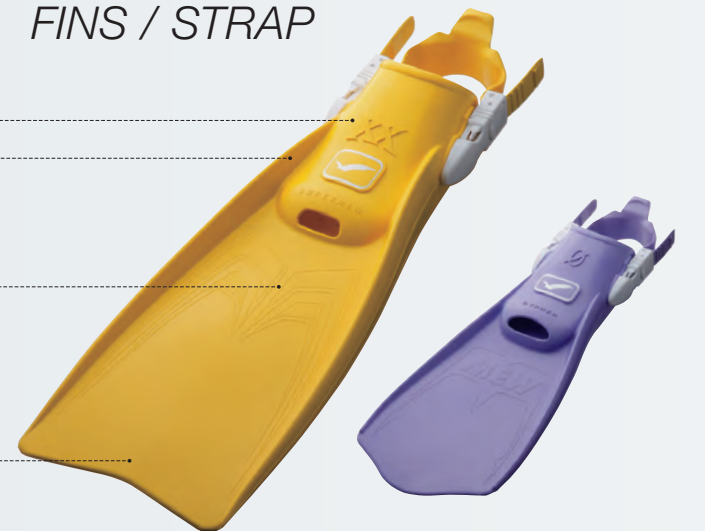

FINS / FULL FOOT

- Boot Pockets that Achieve Both the Outstanding Fit of a Full-Foot Design and Ease in Getting on and Off**
 These feature a boot-pocket design boasting a long sole and high instep that snugly envelops the entire foot. This achieves a fit of outstanding comfort, along with conveying leg power with the same ease as full-foot fins for unflagging propulsion.
- Ribs Designed to Firmly Catch the Water**
 Making the ribs the same height on the top and bottom of the blade has radically improved rebound performance. A secure, efficient catch while finning, without side planing and blade twist, enables you to powerfully and confidently drive forward on both the down kick and the up kick.
- Hybrid Rubber Delivers Even Greater Propulsion**
 To enable these fins to powerfully, yet smoothly, deliver tenacious propulsive power, different pliant and resilient types of rubber are used for the foot pocket, blade, and ribs.
- Optimized Blade-Tip Line**
 The end of the blade is shaped to allow water to smoothly escape. Because the blade rebounds more quickly, throughout your session, you can efficiently keep on kicking.
- Fin Bottoms Made for Safety and Ease of Use**
Super Grip System
 Complementing the all-over thickening of the sole, grip has been improved with a new tread pattern.
- A State-of-the-Art Rubber Configuration Helping to Achieve Both Light Kick Feel and Sure Propulsion**
 A state-of-the-art protruding configuration is used for fins that delivery sure propulsion and won't come loose even with forceful kicking.
- Jet Holes (Two Locations)**
 Jet holes funnel water rearwards, reducing turbulence and side planing when you kick. To achieve a powerful jet flow, these new-design jet holes have wide entrances and narrow exits.

- 3D Pocket**
 Firmly hugging the Achilles tendon, the 3D pocket opening has been designed to reduce looseness and to hold your foot just like a sports shoe. This superior fit makes fin work more efficient.
- Side-Slip Stoppers**
 The same wraparound tread that is on Gull Barracuda Fins is standard. Tread provides better grip on slippery boat decks and rocky shores, or other entries where the footing is poor.
- Ribs Designed to Firmly Catch the Water**
 Making the ribs the same height on the top and bottom of the blade has radically improved rebound performance. A secure, efficient catch while finning, without side planing and blade twist, enables you to powerfully and confidently drive forward on both the down kick and the up kick.
- Hybrid Rubber Delivers Even Greater Propulsion**
 To enable these fins to powerfully, yet smoothly, deliver tenacious propulsive power, Gull's innovative production methods integrate different pliant and resilient types of rubber for the foot pocket, blade, and ribs.
- Optimized Blade-Tip Line**
 The end of the blade is shaped to allow water to smoothly escape. Because the blade rebounds more quickly, throughout your session, you can efficiently keep on kicking.
- Foot Pocket Designed to Easily Expel Water**
 The foot pocket is formed using a thin and pliant rubber material. This makes the fins easy to put on and take off. Even first-time users of full-foot fins can get into and out of these Mew Fins with little effort.
- Blade Tip Shaped to Catch the Water**
 With fins designed to make optimal use of the resilient properties of rubber, firmly catching the water, from the start to the end of the kick cycle, you get solid propulsion.

FINS / STRAP

SUPER MEW XX

These top-spec strap fins achieve the same feel as their full-foot counterparts.

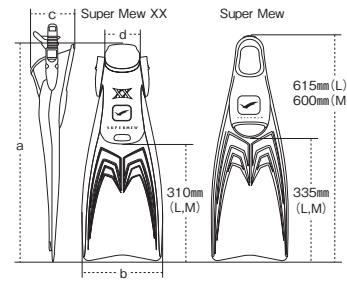

Based on Super Mew, these have been given a strap-fin design. An architecture that boldly shortens the blade makes for greater dynamic performance and ease of movement, enabling comfortable use by all divers. Available for use with wetsuits (23-30cm) and dry-suits (22-28cm).

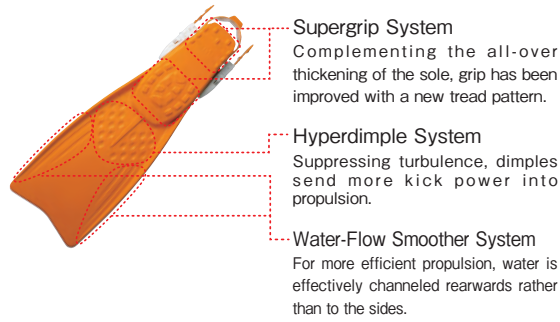

Super Mew XX

GF-2431B	XL	XL	XL	XL	XL	XL	XL	XL	XL	XL	XL

Fin Bottoms Made for Ease of Use and Safety

Newly Designed Blade

While inheriting the width of the Super Mew, these fins are shorter. You get the same easy maneuverability, and even the same feel, as Super Mew. Naturally, the Gull line is made for horizontal movement but, for times when you need to go straight up, these fins are designed to catch the water.

Sole Designed to Transmit Power to the Blade Tip

The slightly thicker-than-usual design ensures obedience to your will. Even when you are kicking powerfully, force is efficiently transmitted to the blade tip.

a	b	c	d	Weight(One of)
S: 540	196	90	85 mm	S: 1,015g
M: 560	200	100	90 mm	M: 1,127g
L: 580	214	102	95 mm	L: 1,245g
XL: 600	214	116	99 mm	XL: 1,300g

SUPER MEW XX Boot Size Fitting Table ※ It is also possible to use these fins with soled boots and dry boots.

Size	GS Boot	Felt Sole Boot	Defender Boot	Dry Boot by Other Makers (World Dive / Mobby Dick)
S	23~24.5cm	—	—	22~23cm
M	25~26cm	22~24cm	—	23~25cm
L	26~27cm	25~26cm	25~26cm	25~26cm
XL	28~30cm	27~28cm	27~29cm	27~28cm

※While we have enlisted the cooperation of Japanese suit makers to check and draw up our own list of items (in the leftmost column) that will fit with Super Mew XX, be aware that if boot inners are worn, the sizing will change; fit also depends on the individual form of your feet; for some people the sizes shown may be too large or too small.

SUPER MEW XX DRY

The slightly thicker-than-usual design ensures obedience to your will. Even when you are kicking powerfully, force is efficiently transmitted to the blade tip.

Super Mew XX Dry is made with a higher density rubber adding 250g compared with the standard Super Mew XX. The fin's center of gravity is placed at the ankles relieving the need to wear ankle weights for a more balanced and liberating dry suit diving experience. The tip's unique shape helps water flow off of the blade for a lighter kick. Recommended for users that find Mantis Dry Fin slightly heavy and hard to kick.

Super Mew XX Dry / Spring Strap

※ M fins equipped with XS size spring straps. L & XL fins equipped with S size spring straps.

Super Mew XX Dry

Fin Strap Type D is easy to adjust to any size for an ideal fit.

GF-2533	M	M	M
GF-2532	L	L	L
GF-2531	XL	XL	XL

※ Comes fitted with black Fin Buckle DX.

One-Hand Fit / Release Spring Strap
Spring Strap II DX comes included as a set, facilitating hassle free attachment and removal of the fins even when wearing a dry suit. The pull tab is outfitted with a large opening making it easy to pull with your fingers for swift fit and release action.

※ Gloves are removed for viewing purposes. Fingers can easily be inserted into the tab even when wearing gloves.

Weighted Rubber
Super Mew XX Dry is made with a higher density rubber adding 250g compared with the standard Super Mew XX. The fin's center of gravity is placed at the ankles relieving the need to wear ankle weights for a more balanced and liberating dry suit diving experience. Especially recommended for dry suit divers that find Mantis Dry Fins slightly too heavy and/or do not fit their sizing.

MEW CYPHER

The exhilaration of free-moving gliding through water that you can feel with every kick of your fins.

An open-heel arrangement of Mew fins enabling even first-time divers great kicking ability. Mew Cypher is designed with a shorter, slightly softer blade allowing for easier kicking. Great for slow, leisurely diving. Stiffer variant of Mew Cypher. Recommended for those wanting stronger propulsion.

Mew Cypher

GF-2333B	M	M	M	M	M	M	M
GF-2332B	L	L	L	L	L	L	L

A Lightweight and Compact Design for Ease of Use Both Underwater and on Entry and Exit

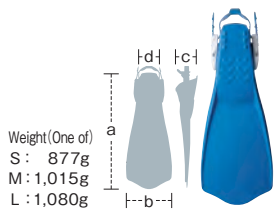

With a blade length shorter than ordinary fins, these are designed for ease of use and lighter weight. Under water, the compact design offers agility and less chance of damaging coral or other marine life. These are also easy to get on and off and tote, even when donning gear on land or on a cramped boat, achieving comfortable entry and exit.

A Middle-Range Blade Design for Maximum Enhancement of Exhilarating Fin Work and Efficiency

Designed with a blade length shorter than ordinary fins, these also shorten the time for which the rubber material flexes to help accomplish nimble and efficient fin work. Moreover, to achieve maximum performance in these middle-range fins of the sense of pliant grip obtained when using rubber fins, the height of the keel at the rear has been slightly lowered, for a design that yields greater comfort.

Boot Pockets that Achieve Both the Outstanding Fit of a Full-Foot Design and Ease in Getting on and Off

These feature a boot-pocket design boasting a long sole and high instep that snugly envelops the entire foot. This achieves a fit of outstanding comfort, along with conveying leg power with the same ease as full-foot fins for unflagging propulsion.

Mantis Dry Fin

Mantis Dry Fin / Spring Strap

GF-2285B	S	S	S	S
GF-2283B	M	M	M	M
GF-2275B	S	S	S	S
GF-2273B	M	M	M	M

※ That spring straps has installed to Mantis Dry fin as follows. Mantis Dry fin S size has spring strap XS size, M size has spring strap S size

Fin Weight Comparison
The greater mass of the thick soles of Dry Fins shifts the center of gravity further down the leg than ankle weights. This makes it easier to keep your trim stable. ※ Assuming 500 g ankle weights are worn.

Comparison with Mantis Fin

With a bigger boot pocket they are easier to get on and off. Ankle weights are not needed because the fins themselves have sufficient mass. If you are confident in your leg strength and want fins that provide more dynamic propulsion, these fins are made for you.

a	b	c	d	Weight (One of)
S: 525	187	115	80 mm	S: 1,550g
M: 565	195	115	90 mm	M: 1,690g

MEW

MEW 40th Anniversary

In 1984, GULL introduced MEW—a full-foot fin that became our flagship model. The design, with carefully crafted blade length and angle, ensures a smooth transmission of kicking force for versatile diving experiences, including scuba and freediving. The rubber's fine-tuned rigidity allows precision in movements and control, embodying the wisdom of its predecessors and remaining the foundation of our fins.

Do you have the courage to explore uncharted depths?
 Can you be yourself and find solace in the ocean?
 Do you cherish sharing special moments with friends at sea?

With gratitude to all sea lovers,
 To share the underwater joy with as many people as possible,
 MEW, celebrating its 40th year, continues as your companion.

Rib Shape

The ribs on the Mew are designed with the down kick in mind. At this time when power is most easily converted to propulsion, Mew Fins firmly catch the water. Providing pleasing response to strong or subtle kicks, they suit a variety of conditions and are loved by both power divers and occasional divers, who have different leg strengths.

㊦㊧㊨㊩ FIN

Long Blades

Giving your legs propulsive power even in places with strong water flows, long blades are the outstanding feature of Warp Fins. With Warp, you can extend your range of diving experience.

Blade Tip Shaped to Catch the Water

With fins designed to make optimal use of the resilient properties of rubber, firmly catching the water, from the start to the end of the kick cycle, you get solid propulsion.

Foot Pocket Designed to Easily Expel Water

The foot pocket is formed using a thin and pliant rubber material. This makes the fins easy to put on and take off.

EMDEN EMDEN

Basic short blade rubber fins offering easy mobility with a natural kick everytime. Perfect for snorkeling and novice scuba divers.

Crafting Excellence : Handmade with Kinugawa Rubber

If asked why Kinugawa insists on using natural rubber for fins, our craftsmen would respond, "Natural rubber stands out in resilience and durability, making it the ideal material for fins." Working with natural rubber is challenging and delicate. Unlike synthetic rubber, which is artificially created and uniform in quality, natural rubber is coagulated from the sap of rubber trees, leading to variations depending on the harvesting season. The process involves assessing the quality of the natural rubber, combining it with synthetic rubber and pigments for color, and formulating to prevent deterioration—all while adjusting through the "kneading" process. This is where the skill of the craftsmen shines. Once kneaded, a portion of the material is tested for required stiffness levels before advancing to the "vulcanization" process. Vulcanization involves pressing materials under high heat, applying pressure with a mold for each piece separately. Hence, no two fins are exactly alike. Skilled craftsmanship is crucial to adjusting vulcanization time while considering the arrangement, weight, and outcome of the material. Maintenance of molds is equally important, involving correcting wear and tear, misalignment, and

scratches that could lead to defects. In the "finishing" stage, excess material from pressing is trimmed by hand, delicately cut with precise force, completing the product. Each step in the fin-making process is infused with the expertise of craftsmen, with each step integral to creating the final product. Bearing the soul of our craftsmen, we hope divers will use their Kinugawa fins for a long time. A significant aspect of Kinugawa fins' unique properties lies in the research and development dedicated to working with rubber. Kinugawa engineers aim to create long-lasting fins with enhanced durability. Diligently researching how to maintain the rebound performance of rubber, assessing optimal ratios of components to prevent cracking and degradation, and how to increase overall durability. Dedicated to creating a superior product and enhancing the enjoyment of divers, Kinugawa's engineers and craftsmen embrace the challenges of working with natural rubber. Despite the trend towards full automation, Kinugawa vows to continue the handmade production of rubber fins.

Different Colored Warp Fins Have Different Stiffness

[Hard Specification]
 ● Black ○ White

[Standard Specification]
 ● Red ● Yellow ● Marine Blue

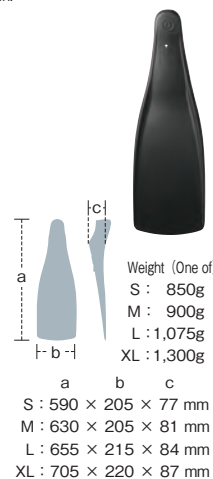

Stiffness similar to Hard Mew. These long stiff blades powerfully catch the water and feel like a natural extension of your legs. The long blade combined with the white color is favored by diving guides due to its high visibility and exceptional power.

Stiffness similar to Mew. An all-around fin that accommodates all sorts of diving scenarios. Designed for ease of use, they offer a comfortable, easy kick. Especially during surface swims.

GP-7114B Spring Fin Strap II DX

○ Spring material: SUS304 (excellent corrosion resistance)
 ○ Black
 ○ XS (16cm) / S (18cm) / M (20cm) / L (22cm)
 ○ Comes standard with DX fin buckle set ○ pair

Easy to Put on and Take Off, Fits Diver Movement

•The functional part of the strap itself is a metal spring, which makes it quick and easy to put on and take off the fins even when wearing boots. This simplifies fin management when the entry or exit footing is bad, such as when boat diving.
 •Use of a spring strap gives you an elastic, self-regulating attachment that compensates for loosening caused by things such as changes in water pressure and contraction of boot and other materials.

Internal part for buckle : color of bushing depends on size.
 Black: S (18cm) L (22cm)
 Gray: M (20cm) XS (16cm)

Far Infrared Ray (FIR) Fleece Material Lined with a highly insulating Far Infrared Ray (FIR) fleece material on the inside. FIR material absorbs heat generated by the body and releases it in the form of infrared rays, providing excellent warmth.

Deodorization system (anti-odor, antibacterial treatment) Reduces unpleasant smells by inhibiting the growth of bacteria and moulds. Enjoy a comfortable refreshing feel during use. Note : The antibacterial anti-odor treatment is not permanent.

UNISEX MEW BOOTS Series

Multi-function model with three-fold benefit : antibacterial, heat retention, and non-slip.

Because the front foot is stretch jersey, the boot is much easier to get on and off and mobility is radically improved.

GA-5621C Mew Boots (Socks type)

- 3mm neoprene / stretch jersey
- SCS seal used at the ankle

The winter model combines multifunctionality with great thermal properties.

Because the front foot is stretch jersey, the boot is much easier to get on and off and mobility is radically improved.

GA-5622C 5mm Mew Boots

- 5mm neoprene / stretch jersey
- SCS seal used at the ankle

Water Blocked Ring System (Ankle Sealing) With SCS material sealing at the ankle preventing water ingress and extrusion, these boots have excellent thermal performance.

Non-Skid Grip system (Tenacious Sole) From heel to toe, the sole has an extensive gripping area. The wavy tread pattern is able to reduce slippage on many types of surface.

To increase overall grip, sole wraps up beyond the heel. This prevents fins from slipping off. Grip also stops rubbing and increases comfort.

Super Mew / Boot Matching Table → [P30](#)

Mew / Boot Matching Table → [P31](#)

Warp Fin / Boot Matching Table → [P32](#)

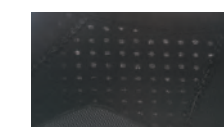

These low-cut Mew Boots have the feel of ordinary shoes, and also drain well when exiting the water.

Wetsuits of standard design that achieve both good heat retention and ease of wearing and shedding. You can enjoy full coordination with light gear from Gull.

GULL READY-MADE 5mm WET SUITS

FIR (far infrared nap) used both for heat retention and, because it eases friction with skin, to provide superb feeling of fit comfort. High mobility from stretchy fabric that allows unhindered body movement.

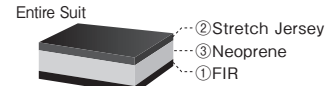

- Skin neck specification
- Seam taping
- Urethane pads
- Inospas jersey

Far Infrared Ray(FIR) Fleece Material

Lined with a highly insulating Far Infrared Ray (FIR) fleece material on the inside. FIR material absorbs heat generated by the body and releases it in the form of infrared rays, providing excellent warmth.

Fabric Specification Key Points

- FIR**
Besides heat retention, the nap minimizes friction with skin and provides superb fit comfort. Has mesh skin outside layer.
- Stretch jersey**
Superbly stretchy jersey allows unhindered body motion.
- Neoprene**
Superbly stretchy and heat retaining materials used in 3-layer core fabric.

Comfort neck system
Extended Velcro® fastener reaches right to the bottom of the throat. If you have a large or a slim neck, you can adjust a comfortably snug fit that properly keeps out water.

Excellent Ease of Putting on and Taking Off
To achieve both ease in getting in and out of the suit smoothly as well as dynamic mobility, fasteners offering enhanced stretchability are used at the wrists and ankles.

Instructors and guides on the Izu Peninsula overwhelmingly endorse 6.5 mm rokuhan fabric. Rokuhan wetsuits have superior heat retention, excellent underwater comfort, and can be used over a long diving season.

TRUE BLUE ORDER-MADE 6.5mm J × SCS / J × SKIN

You can choose from two types of ROKUHAN suit. The KABURI is a pullover jacket and long john combination designed for easy movement and warmth. Providing superior heat retention, the SEMI-DRY is a one-piece with a horizontal front zipper.

- Rokuhan with Hood 6.5J × SCS: Cross jersey outer/SCS inner 6.5W both sides rubber
- Rokuhan semidry 6.5 J × Skin: Skin outer / Cross jersey lining Ti-Zip front fastener

SS/SN | Smooth SKIN / Stretch Jersey

Stretchy Smooth Skin Fabric

The exterior utilizes Extra stretchy SS material while the inner SN lining reinforces durability especially at the joints.

*The Skin fabric can be damaged by the fingernails when putting or taking off. Please exercise care.

Reduces inflow and outflow of water at the waist to retain warmth. Has a wide velcro area to help adjust to personal comfort.

Gull Skin logo on left hip.

Whether you are looking for heat retention, mobility or other features, wherever you dive, the Gull INNER Series has a garment to suit your needs.

SCS INNER SUITS Series

In the Gull inner series, Super Composite Skin is the material that provides greatest heat retention.

REGULAR USE TYPE

Made from 1-mm-thick charcoal-colored SCS and with two types of high-stretch material at chest, armpits, and sleeves, this must-have inner is also cut to make it easy for you to relax and breathe. It provides year-long service.

SCS Material (Inner Lining)

To achieve outstanding heat retention, Super Composite Skin has a special surface coating that suppresses outward radiation and conduction of heat. To minimize constriction, the top is tailored to fit comfortably at the chest, enabling you to relax and breathe.

Inospan Jersey (Outer) & Flist Jersey (Inner Lining)

Outer surfaces are covered with Inospan jersey, which has superb durability and more than five times the elasticity of normal jersey. To enhance mobility, the lining is made from Flist jersey, another extra-stretchy material.

Suitable for skin diving or inner layering, these 1-mm-thick garments have a charcoal SCS lining that conserves body warmth.

FIR INNER SUITS Series

Gull achieves optimal heat retention by lining the neoprene material with FIR nap, which has excellent far infrared heat-generation and heat-retention properties.

WINTER USE TYPE

To enable diving when the water temperature drops, Gull garments for winter use are designed to maximize heat retention. Designed with mobility in mind, the hood vest can also be worn as an outer layer over a suit. The full-length front zipper makes it easy to put on and take off.

What is the impact of near-infrared rays on the skin?

Near-infrared rays have a longer wavelength than ultraviolet rays, allowing them to penetrate deeper into the skin. The major cause of wrinkles and sagging is believed to be sunlight. UV-B rays penetrate the skin's protective barrier (stratum corneum) into the superficial epidermis, causing blemishes and freckles. UV-A rays reach the dermis, where collagen and elastin support skin cells, causing not only blemishes but also wrinkles. Recent research suggests that near-infrared rays, penetrate deep into the fascia and muscle layers in the dermis and subcutaneous tissues, becoming a cause of wrinkles and sagging.

Composition of UV & Near-Infrared Rays in Sunlight

UV rays roughly make up 6% of sunlight, with near-infrared rays accounting for 42%. It is important to shield against near-infrared rays to prevent aging of the skin.

Trubeaute®
Trubeaute™ Anti-Photoaging

Absorbing/blocking near-infrared rays helps reduce adverse effects on the skin and cannot be achieved with UV protection alone.

Gull Equipment and Travel? A Suitcase Made for Divers.

HARDSHELL SUITCASE

A large-capacity durable hardshell suitcase capable of storing all diving necessities. Its elongated form allows for fins to be placed without bending.

Lightweight Durable Elongated Slim Profile

Made of a lightweight yet sturdy polycarbonate mixed resin. Its slim lengthened form also allows for safe fin storage.

* Capable of loading up to Warp Fin XL.

Multiple Handles

Handles are located on the top, side, front, and bottom to facilitate carrying in a variety of ways.

Dual Wheel Casters

Dual wheel casters are great at noise reduction and provide excellent stability. A new elastomer-based material is used to further improve noise reduction and durability, enabling smoother rolling.

White

TSA Rotary Locks

Fastened with two stainless steel TSA rotary locks. The locks offer a secure seal compressing the shells together.

How to Open

Set the lock tab vertically.

Lightly grip the tab.

Rotate clockwise by about 180° and the fastener will unlatch. Rotate counter-clockwise to reattach.

When unlatched, pull to open.

Reliable Transport

Transport is sturdy even when stored to up to full capacity with heavy equipment.

Large 150L Capacity

Facilitates storing a full array of diving equipment from wetsuits to heavy gear. Also capable of storing gear in combination with mesh bags, recommended for international travel.

Easy to Use Inner Construction

Interior consists of ample compartments with cross belts for secure fastening. The red coloring on the interior makes it easy to find smaller items such as equipment parts.

LIMITED EDITION

GB-6506C Hardshell Suitcase

- Body Material: Polycarbonate mixed resin
- Exterior Dimensions : H78 × W42 × D38cm
- Interior Dimensions : H73 × W41 × D37cm
- Weight : 6.1kg Capacity : 105L

MESH CARRY BAG NEW

A mesh bag that can be carried in three ways: as rolling bag, backpack, or shoulder bag.

Protective Wheel Cover

The wheel cover prevents dirt from transferring to the body when worn as a backpack.

Double Zipper

This large-capacity mesh carry bag allows for the storage of a full range of equipment. The double zipper design provides a wide opening for convenient access.

Black

GB-7148A Mesh Carry Bag

- Black Material : 420 COAL PVC × Nylon Mesh W70 × D35 × H35cm
- Capacity : approx. 85L Weight : approx. 1500g Double zipper design Side pocket for smaller items
- Neoprene on shoulder straps provide a soft point of contact.
- Detachable shoulder belt

GALLANT Series

Off to the seas of the world with a spirit of adventure.
This bag securely holds the equipment you travel with when visiting dive areas around the globe.

MESH BAG

Whether you are looking for a large, functional carryall or for a stylish design, in the Gull MESH Bag Series, you can find the bag you want.

SQUARE MESH BAG

Large-capacity, highly durable mesh bags. Available in five different colors that allow for extra freedom of coordinating with your outfit/gear.

When you have to carry a bag heavily full of gear, a grip handle is a blessing.
Stow all your gear in a large-capacity mesh bag. The U-shaped opening makes it easy to put things in and take things out. A side pocket keeps your smaller items handy.

GB-7132D Square Mesh Bag

- U-shaped zip ○ Has handy storage side pocket ○ W70×D35×H35cm
- Capacity : approx.85L ○ Weight : approx.980g
- A mesh bag with a mesh bottom allows drainage and air circulation : rinse in the bag and dry on the go.
- Less prone to salt clogging,* large zip teeth make the bag easier to open and close.
- * After exposure to salt water, it's usually harder to open and close zips.
- Neoprene handle is softer on hands and cushions shoulder carrying.

ACTIVE MESH BAG

Simple and stowable down to a compact size, the all-mesh design of these bags provides quick drying and great breathability.

GB-7133D Active Mesh Bag

- Black ○ W70×D35×H35cm ○ Capacity : approx. 85L
- Weight : approx. 500g
- Neoprene handle is softer on hands and cushions shoulder carrying.

SNORKELING MESH BAG

These compact all-mesh bags can hold a full set of snorkeling or skin diving gear.

Holds your set of three - boots, gloves, wetsuit - with room to spare.

GB-7134D Snorkeling Mesh Bag

- Black ○ W62 × D25 × H25cm ○ Capacity : approx. 38L
- Neoprene handle is softer on hands and cushions shoulder carrying.

MESH POUCH NEW

Rubber Coated Mesh Pouch

GB-7149A Mesh Pouch

- White
- Material : PVC Mesh
- H23 × W30 × D10cm
- Capacity : approx. 6.9L
- Looped strap. Also comes with carabiner.

Contents can easily be seen through the rubber coated mesh. Stores towels, cameras, and wet items that can be left in the bag to dry.

WATER PROTECT BAG

Easy for moving your diving gear and also great for hotel and beach life, for just carrying things around while you're on land between dives.

WATER PROTECT SHOULDER BAG NEW

Water resistant shoulder bag. Suitable for use on location or in urban areas.

GB-7147A Water Protect Shoulder Bag

- White / Black / Olive
- H19.5 × W23 × D10cm
- Capacity : approx. 4L
- Material : Tarpaulin
- * Not completely waterproof

Magnet closure for easy and secure opening and closing.

Includes an interior zippered pocket for convenient storage of small items.

Shoulder belt is detachable, making it versatile for use as a standalone bag or as an insert for another bag.

SHOULDER TYPE

Shoulder straps let you carry bulky gear more easily. The L-size bag is large enough to hold a dry suit.

GB-7136C Water Protect Bag L (H73 × W56 × D34cm)

- White/Gray/Black/Blue/Olive/Orange
- Capacity : 60L ○ Material : Tarpaulin
- Bag form : Drum shaped
- Shoulder straps : 2 included

GB-7137B Water Protect Bag M (H59 × W38 × D22cm)

- White/Gray/Olive/Black/White/Blue/Orange
- Capacity : 20L ○ Material : Tarpaulin
- Bag form : Drum shaped
- Shoulder straps : 1 included

GB-7138B Water Protect Bag S (H34 × W25 × D13.5cm)

- White/Gray/Black/Blue/Olive/Orange
- Capacity : 3L ○ Material : Tarpaulin
- Bag form : Drum shaped

BACKPACK TYPE

A highly functional bag that can hold all sorts of fins ranging from snorkeling fins to those for skin diving fins.

GB-7144B Water Protect Snorkeling Rucksack

- H68 × W33 × D17cm ○ Capacity : approx.24L
- Material : Tarpaulin

With shoulder straps

POUCH TYPE

Simple waterproof pouch Useful for holding things that you want to keep dry.

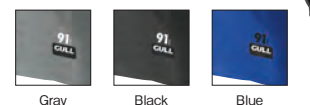

GB-7139C Water Protect Pouch (W24 × H16 × D10cm)

- Capacity : 3L ○ Material : Tarpaulin
- * Not completely waterproof

TOTE TYPE

This large-capacity tote bag can hold a full set of diving gear.

GB-7141C Water Protect Bag Tote

- W65 × D35 × H40cm ○ Capacity : approx. 91L
- Material : Tarpaulin ○ Stay-shut strap and buckle

Waterproof-specification tarpaulin material. It's also very durable.

Hold all your gear in huge 91 L capacity

GULL WEIGHT VEST

A natural complement to a dry suit and, to distribute weight and relieve stress on the lower back, also useful over a wetsuit.

GG-4615B GULL Weight Vest

- Black ○ Material : 1680D + PVC Seawater Resistant Fabric
- Weight : 455 g ○ 4 Pockets (2 front, 2 Rear)
- Maximum Loading Capacity : 8kg

Cushioning on the body side reduces any pain caused by pressure or impact from the weights.

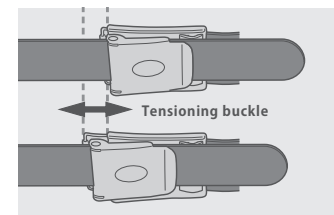

GULL ADJUSTABLE WEIGHT BELT

Tensioning buckle provides automatic adjustment and, with 4 pockets and 6 pads, this belt lets you enjoy greater comfort during use.

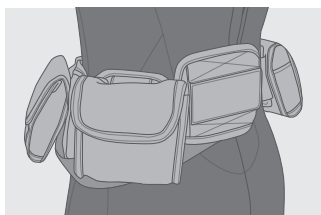

GG-4619B GULL Adjustable Weight Belt

- Black ○ Material : 840D+PVC Seawater-Resistant Fabric ○ Weight : 755g
- Size : Total Length 125cm (Fits waist size to 105 cm) ○ Maximum Loading Capacity : 8kg

Tensioning Buckle Automatically Keeps the Belt Secure

Owing to compression of suit materials by water pressure, when you dive, your belt is likely to loosen and slip and upset your balance. A weight belt with tensioning buckle helps you to maintain your best position.

Reduce the burden and get a comfortable fit with 4 pockets and 6 soft pads

4Four pockets enable you to best position the weights and spreads the burden on the waist. Then, the pads at the center of the belt and at the weight bags, further improves fit and comfort while wearing.

GULL TENSIONING BUCKLE

Tensioning buckle that automatically adjusts fit.

GG-4610D GULL Tensioning Buckle

- Weight : 200g

SHAMPOO

Shampoo for cleaning and maintenance of wetsuits and drysuits.

The gentle, fragrance-free, and skin-friendly composition of this shampoo prevents fabric deterioration, ensuring prolonged use of your gear. It includes a disinfectant to ward off unpleasant odors. With only environmentally friendly ingredients that naturally decompose, it contributes to a sustainable and eco-friendly solution.

NEW GA-5057A Wetsuit/Drysuit Shampoo

- Contents : 500ml
- PH Neutral
- Ingredients: Surfactant (non-ionic, 10% high-grade alcohol based), fatty acid alkanol amide, disinfectant
- Fragrance-free*

BRAND POLICY / KINUGAWA

Kinugawa Group

Kinugawa Group is dedicated to creating trustworthy products that bring the joy of the sea to a wide audience. With three distinct brands – Gull for diving equipment, Cocoloa exclusively for women, and AQA for family leisure and snorkeling – the group offers a diverse range of marine sports gear. Kinugawa Corporation focuses on enhancing product development, leveraging expert knowledge, while Kinugawa Pacific Co., Ltd. handles production, research, and manufacturing improvements. The group's goal is to deliver safe, reliable, and authentic products for customers worldwide.

SAFE RELIABLE AUTHENTIC

Safe, reliable, and authentic equipment begins with Tokyo.

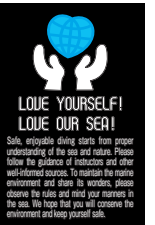

Kinugawa has a long-standing commitment to manufacturing, backed by traditions with a sense of responsibility and pride for "made in Tokyo" quality. Made at our very own facilities since 1955, We've consistently made equipment that divers trust. Safety, Reliability, & Authenticity are the three key principles we continue to treasure. As a long time manufacturer, we deliver safe and reliable products by making full use of our ongoing technological advancements for product improvements and the latest developments in manufacturing. We take pride in staying true to our dedicated manufacturing process from start to finish for an authentic product every time. While spreading the joy of the world's beautiful oceans to more divers, we've taken initiatives to reduce our environmental footprint and develop higher-quality, longer lasting equipment to reduce waste. Kinugawa continues to explore solutions for a more sustainable production process to better protect the environment.

The Bond we Share

Diving allows us to enjoy the many blessings of the sea; the beauty of the ocean's formations and the countless living beings it bears. Nevertheless, we should always be mindful when appreciating our captivating oceans by being considerate of the environment. As a long-standing diving gear manufacturer, we consider it our responsibility to help protect the sea and inspire awareness to current and future generations to come. It is central for each of us to realize our impact and take action concerning environmental issues, while

working together to find sustainable solutions for the future. We cannot forget to thank all those who have an undying love for the ocean, and continue to preserve this natural environment. From the veterans who've helped pioneer the diving ecosystem in Japan, to the new-comers who carry strong passions and new ideas to better enjoy the seas, we thank each and every one of you from the bottom of our hearts. Let us not forget the love our beautiful oceans deserve. We thank you for your collaborative efforts on protecting our seas.

We at Kinugawa believe in sustainable activities to protect our oceans.

Team Chura Coral

Coral deterioration has sharply increased due to rising water temperatures and coral bleaching. Team Chura Coral is an initiative formed in 2004 by businesses in and outside of Okinawa aiming to restore its former underwater landscape by physically planting coral. Through the combined efforts of Okinawa's Onna Village's coral seed planting program, as well as local and national businesses, Team Chura Coral spreads the message "Have a heart that values the Chura Coral". With the support of Onna Village Fisheries Cooperative, the Ministry of Environment of Japan, Okinawa Prefecture, and Onna Village, Team Chura Coral aims to conserve and restore a local treasure trove of biodiversity and resource for tourism.

Community Partnership

Since 1955, we have been dedicated to producing quality products from our Tokyo base. The unwavering support of our local community in Tateishi, Katsushika-ku, Tokyo, has been crucial to our success. Our commitment to employing local residents and utilizing our Head Office showroom in Higashikomagata, Sumida-ku, Tokyo as a communication hub underscores our emphasis on community engagement. We deeply value these local ties, and, thanks to the support received, we actively seek to establish a strong partnership with the community for both survival and growth. As a pioneering manufacturer of diving gear in Japan, we aspire to achieve sustainability while progressing hand-in-hand with our community.

SPECIAL THANKS

Cover・P2~P5・P54 Photo

Nature photographer Kirin Sekito

In my freelance photography, through landscapes and underwater photographs, I seek to convey the beauty of nature to people all over the world. I constantly take pictures of beautiful scenes in Japan to show people everywhere just how beautiful it is on these islands and in the surrounding seas. <http://www.wildkirinphotography.com>

Cover Photo : Tonaki Islands, Okinawa, Japan
Dive location "Grucuno Point" by Tonaki Island, Japan, adorned with the dance of Peach Fairy basslets and Amethyst Anthis fish.

Uncompromising quality for over half a century. Reliance that breeds new trust. Kinugawa has continued to refine technology for safety and durability in production in Japan. And no matter what location where we make our products, we will never make any compromise in quality. Testimony to this trust is Kinugawa quality.
